Penetration Testing Services

What does Mercury STK provide for Pen testing? Here is our Top 10 Best in Class list before, during and after our pen testing:

Before and During Pen Testing:

1. We meet with our clients and start with a dedicated Scoping meeting to ensure the scope is defined properly and expectations are understood. Our subject

matter experts engage with your team, to fully understand the business and network environment and properly capture the scope and requirements

2. We will create a detailed project plan for each penetration test to ensure expectations are met and testing can be performed under controlled conditions

3. We have dedicated teams to assign to each pen test project, allowing to finish a pen test in the shortest amount of time feasible to minimize impact to your

business

4. We use Industry Standard Pen Testing methodologies, we will disclose and utilize all industry standard pen testing methodologies at our disposal and to

ensure that the results are repeatable and well understood by your auditors

5. As part of the project plan, we will create a communication plan established and defined based on your companies preferred method of communication

with your team, stakeholder(s) and sponsor(s)

6. A final report will be provided with content-rich data such as screenshots describing each exploit and step by step descriptions will be provided to

reproduce the exploit, understand the impact and conduct remediation

7. We understand that pen testing is a deeply personal and confidential business engagement. Our testers are best in the field and reside in the US. We

maintain appropriate certifications related to their testing specialty

After the Pen Test:

8. Following our pen testing engagement, we will provide all necessary services to validate that remediation efforts were successful, and vulnerabilities were

resolved

9. Once the pen test is complete, we will help your organization analyze the findings and prioritize them based on risk. We will offer to prepare an executive

level report that will supply a strong competency in Governance, Risk and Compliance to support you in incorporating the results into your risk

assessment risk register

10. We will assist your organization post assessment to build a remediation plans and validate remediation designs, and assist with implementing fixes
